

Product Recommendations for Tobacco

Setter Water

Regardless of starter fertilizer that is used, add 2 quarts of EARTHQUAKE Liquid Humic, 1 to 2 quarts of Micro-N-Rich, and 4 ounces of NanoN+ per acre.

Other products to consider adding at planting:

- 1 to 2 quarts of Triple 8 Plus (instead of Micro-N-Rich)
- 2 to 4 quarts of Sweet 'n' Loam
- 16 to 32 ounces of PhycoTerra

Phos Factor Z can also be used as a starter at 2 to 5 gallons per acre. Product left over from planting can be foliar applied at 1 gallon per acre.

Lay-By

With liquid nitrogen, add 1 to 2 quarts of EARTHQUAKE Liquid Humic and 1 to 2 quarts of Micro-N-Rich and 4 ounces of NanoN+.

Other products to consider adding to this application:

- 1 to 2 quarts of Triple 8 Plus (instead of Micro-N-Rich)
- 2 to 4 quarts Sweet 'n' Loam
- 1 to 2 quarts BrimStone 17

If chemical applications are made prior to topping (for disease or insect control), also apply 1 quart of EARTHQUAKE Liquid Humic and 1 to 2 quarts of Triple 8 Plus.

If foliar feeding any starter fertilizer that may be left over from planting, add 1 quart of EARTHQUAKE Liquid Humic and 1 to 2 quarts of Micro-N-Rich (or Triple 8 Plus). 2 to 4 quarts of Sweet 'n' Loam can also be added to this application.

NanoPro is suggested to be added to every foliar application that includes fungicides, and systemic insecticides; for enhanced delivery of applied nutrients and chemistry.

Reproductive Growth Stage/Topping

With sucker control, apply 2 quarts of PaybackK and 1 quart of EARTHQUAKE Liquid Humic for additional leaf size and weight.

Comments

- All suggested applications are *per acre*.
- Foliar applications are suggested in 10 to 20 gallons of water per acre.
- When applying Sugar Creek Ag products with other products, including herbicides, pesticides, and fungicides, a jar test is recommended for compatibility.
